

# ABSTRACT

A connecting device for furniture panels is proposed, having a first guiding element (4, 5) for guiding a locking element (8, 9) arranged on a first furniture panel, by means of which device furniture panels can be connected together without tools and independently of specific table programs. This is achieved in accordance with the invention in that the locking element (8, 9) is embodied as a curved locking element (8, 9), the first guiding element (4, 5) exhibiting at least one curved, first guiding area for guiding the locking element (8, 9), and a second guiding element (4, 5) arranged on a second furniture panel being provided with a curved, second guiding area for guiding the locking element (8, 9).
